

Intelligent Automation for All

Focus on what's important. Automate the rest with Systema Solutions and Microsoft Power Automate

Who this is for

Humans excel at creative and strategic thinking, but we spend much of our time performing repetitive and manual tasks. This whitepaper is for anyone who uses a PC in their day-to-day work and could benefit from automating repetitive tasks.

In this whitepaper, you'll learn how Power Automate puts the power of intelligent automation into everyone's hands--from citizen developers and business users to professional developers alike—to seamlessly build automated solutions with enhanced security in a single, low-code, user-friendly platform.

Power Automate empowers small- and medium-sized businesses as well as enterprises to create bottom-up innovation and achieve system integration that is scalable with a low-code, user-friendly solution.

Read how to unlock human potential through automation, and how Microsoft and Systema Solutions are bringing “Intelligent Automation for All” to life through Microsoft Power Automate.

Unlock human potential through automation

In today's business climate, companies face seemingly impossible challenges: the ever-increasing speed of business, soaring customer expectations, and greater competition for resources.

As companies across industries navigate this uncertainty, investments in people and the right technology have become paramount. Strategies for IT and application spending look very different than they did just a few years ago due to growing demands for digital fluidity from consumers, employees, and stakeholders.

On the surface, automation is a tool to streamline processes, serve customers more efficiently, and grow profit margins. It can help organizations overcome skills gaps and shortage of workers in key positions while retaining existing employees. But automation is much more than that. It unlocks the next level of human performance and achievement. When organizations embrace automation as a critical component of every business function, it creates unparalleled opportunities for people to rise above the grind of unfulfilling taskwork and unlock their full potential. Automation allows employees to engage in creative, exciting, rewarding endeavors that lead to elevated career and personal satisfaction.

Our potential is limitless. Our time is not.

Humans may excel at creative and strategic thinking, but we spend too much of our time on repetitive and manual tasks. Automation offers a path forward by allowing businesses to capitalize on the speed and efficiency needed to capture market share, deliver on-demand digital experiences, and offer employees more fulfilling work.

Almost every occupation has partial automation potential, with some activities that could be automated. It is estimated that **about 50% of all the activities people are paid to do in the global workforce could potentially be automated by adapting currently available technologies.** That amounts to almost \$15 trillion in wages. Additionally, **60% of all occupations have at least 30% technically automatable activities.**

2

Turn outdated into automated

Discover a
better way to
get things done
across your
organization.

Power Automate is all about having IT systems manage repetitive tasks. With Power Automate, you can turn outdated into automated with a full spectrum of automation solutions to streamline how you work while reducing the risks of human errors.

How can Systema Solutions and automation can make a difference for your business?

Common scenarios and capabilities of Power Automate:

- Automate repetitive tasks, like moving data from one system to another
- Guide a user through a process so they can complete the different stages
- Connect to external data sources via one of the hundreds of connectors or directly via an API
- Automate desktop-based and website processes with robotic process automation (RPA) capabilities
- Orchestrate processes end-to-end and trigger microservices
- Send automatic reminders for past-due tasks
- Move business data between systems on a schedule
- Use process mining to identify bottlenecks and opportunities for automation
- Automate tasks on your local computer like computing data in Excel

Let's partner up!

Systema Solutions has been helping small to mid-sized organizations transform their business with technology since 2015. The company provides IT software and services for small to mid-sized organizations to help them connect their business, improve their financial operations, and boost staff productivity.

Systema Solutions is a Microsoft Solutions Partner for Business Applications, specializing in the consultation, deployment, and ongoing management services for Dynamics 365 Business Central and Power Platform.

What could you achieve if you were fully integrated, automated, and ready?

- Do your employees regularly download email attachments and then upload the file to the database?
- Does the process of getting a new purchase order approved involve you taking a form from desk-to-desk to get sign-off?
- Do you have to log into a website every morning, find the daily numbers, and then save those into another system?

Power Automate allows anyone with knowledge of the business process to create a repeatable flow that, when triggered, leaps into action and performs the process.

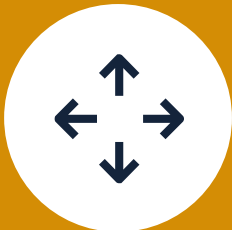

Time saved once you automate repetitive manual tasks simply by recording mouse clicks, keystrokes, and copy/paste steps from your desktop is time employees can invest in higher-value work, from engaging with customers directly and effectively to focusing more on strategic work that benefits your business.

Power Automate is an accelerator for your business

Boost Productivity

Minimize repetitive, manual, time-consuming tasks and create more time for your teams to focus on strategic work with a single platform for automation.

Automate at Scale

Reduce time-wasting tasks across modern and legacy systems with easy-to-use low/no-code automation.

Integrate Secure Automation

Empower a more secure and compliant organization, and rest assured that your data is safe and secure with enterprise-grade governance tools.

Apply Intelligent Automation

Streamline how you work by combining the power of AI with automated workflows and business processes.

3

Scale Business Practices with RPA

Automation is a major driver for modernizing IT and creating efficiency gains for today's businesses. Robotic process automation (RPA) is the technology required to automate applications (or certain functionality in applications) that do not have APIs or connectors.

Businesses can automate mundane, rule-based tasks with point-and-click simplicity across modern and legacy apps, on-premises or in the cloud. Connect old and new systems and reduce repetitive tasks using UI-based automation with desktop flows—the robotic process automation (RPA) capability in Power Automate.

The need for Robot Process Automation (RPA)

Break down the barriers to automating legacy software with RPA

Robotic Process Automation (RPA) mimics user interactions on screen and across systems to free us from those repetitive tasks.

- Faster output at a lower cost
- Reduce human-error
- More time for innovation and strategy

Some applications are too old or expensive to support API connectivity. [With RPA in Power Automate](#), end users can automate their work in these applications by recording manual tasks—such as mouse clicks, keyboard inputs, and data entry, and then automate the replay of these steps to integrate with more complex process automations. Utilize bots and screen scrapers to automate manual tasks.

Record, test, and monitor tasks on execution.

Combine legacy apps, modern apps, and manual tasks in a single automated workflow.

Customize, build, and manage RPA-based flows in a secure cloud environment.

Gain complete transparency over every bot running in the system.

Empower your frontline workers to automate legacy applications using RPA through the desktop and web recorders or the drag-and-drop visual designer to help reduce costly mistakes.

Confidently automate with Systema Solutions' adaptive integration strategy that aligns to your needs. Scale solutions to your evolving demands and leverage hyperautomation for ongoing sustainability. Small- and medium-sized businesses can benefit from scalable models and can start with one solution, then iterate it into a complete platform modernization with one powerful tool— starting with automation.

Integrated low-code development tools offer opportunities for organizations to modernize at scale—in a secure, cost-effective, and governable way.

With Microsoft Power Platform, Automation is not an island and works as one intelligent automation platform.

Power Automate as one intelligent automation platform

4

Unlock new business efficiencies

The global shortage of full-time developers is increasing and estimated to hit 4 million by 2025¹. Many organizations are already successfully using cross-function fusion teams to build applications and flows to achieve business outcomes. There is clear momentum for you to embrace low-code as part of your development process.

By connecting your pro developers with citizen developers in the business, and your IT teams directly, Microsoft Power Automate can increase your organization's low-code application development value with much faster ROI, time to market, and reduction in your overall development cost.

¹[IDC, Quantifying the Worldwide Shortage of Full-Time Developers, Doc # US48223621, September 2021](#)

Powerful alone. Better together.

Build powerful end-to-end business solutions by connecting Power Automate across Microsoft Power Platform—and to Microsoft 365, Dynamics 365, Azure, and hundreds of other apps—to drive innovation across your entire organization.

Microsoft Power Automate allows you to bring automation to your business processes, with the ability to connect to data from hundreds of data sources with a few clicks. All it takes to get started is knowledge of your business process. By connecting Microsoft Power Automate to your existing Microsoft 365, Dynamics 365, and Azure investments, employees can start automating with ease. While each solution is powerful alone, they are better together.

With Systema Solutions and Microsoft's low barrier-to-entry model, organizations can expedite their digital transformation journey. For organizations to reap the benefits of automation, it cannot be an island. To this end, we invest heavily in building native integration across Azure, Microsoft Power Platform, Office 365, and Dynamics 365, and offer hundreds of connectors to many of the world's most widely used applications.

Additionally, Power Automate removes the gap between applications that have modern APIs and those that do not. Power Automate is designed to connect your entire IT environment with one seamless automation platform.

Power Automate for small and medium businesses

Due to its proximity to other components in the Power Platform and Microsoft 365 ecosystem, existing Microsoft customers can often procure Power Automate within their Microsoft 365 enterprise license at a discount, which can lower the initial startup cost for RPA and automation and provides a familiar look and feel for frequent users of Microsoft applications.

A limited free version of Power Automate for desktop is available to Windows 10 and 11 users. A consumption-based pricing model makes it easier for small and medium businesses to remove price-related barriers to RPA adoption, and to reduce the per-unit cost of bot execution.

Optimize your business with automation and enable customers to automate legacy, on-premise processes into cloud-first solutions with low-code automation that is easy for anyone to use.

5

Empower people and teams to be their best

Power Automate allows business owners to begin simply—such as getting an alert when a certain type of file arrives in their inbox—and build from there, no coding required. By turning their PC into a helping hand so they can do more in less time, Power Automate helps business owners solve the challenges that matter to their business.

Hybrid work and the demand for more resilient technology are here to stay, and that means every organization needs digital solutions that free up time from the most redundant tasks for higher-value work.

Organizations from around the world are using Power Automate to provide their customers, partners, and employees with a robust automation platform that streamlines how they work by harnessing low-code automation to simplify workflows.

350,000+

Organizations use Power Automate each month and are launching millions of processes each day
